Section 8 – Client suitability

Nature and certain risks associated with the investment management objectives

- 1 Investors should be aware that the price of shares may go down as well as up and investors may therefore not recover their original investment.
- 2 FAML may invest in financial instruments the price of which will fluctuate having regard to financial markets which FAML is not able to control.
- 3 Investments will all be quoted on a market unless otherwise agreed in writing by the Customer.

FAML makes no assurance with regard to the performance of investments including in particular no guarantee is given as to either capital growth or income that will arise out of the assets in the Portfolio. Past performance is no indicator of what future performance may be.
- 4 Investment into companies quoted on global stock exchanges, either directly or through collective investment schemes, particularly those such as China, India and other Asian countries, Eastern Europe and Latin America which can be defined as Emerging Markets, can be extremely volatile. Generally the volatility of these markets can be far greater than those more mature markets such as USA, UK and Western Europe.
- 5 No contingent liabilities will arise in respect of such investments.
- 6 Fundamental Asset Management Limited will not employ leverage in the portfolio unless otherwise agreed in writing by the Customer.

Important information for portfolios investing in companies quoted on AIM for the purpose of mitigating Inheritance Tax.

- 1 The Portfolio will be invested in the shares of companies quoted on AIM.
- 2 Investment in shares quoted on AIM generally carries a higher risk than investment in shares quoted on the Official List. This is due to factors such as the smaller size of AIM companies, more limited trading history and the illiquid nature of the shares; it may be more difficult for an investor to realise his investment in a company that is quoted on AIM than to realise an investment in a company whose shares are quoted on the Official List of the UK Listing Authority. AIM has been in existence since June 1995 but its future success and the liquidity in the market for shares quoted on AIM cannot be guaranteed.
- 3 Investors should be aware that the price of shares quoted on AIM may be volatile and may go down as well as up and investors may therefore not recover their original investment.
- 4 Share prices of the Designated Investments are deemed to be volatile by nature of the fact they are not listed on a Recognised Stock Exchange ('RSE'). Although AIM is a market platform of the London Stock Exchange and the London Stock Exchange is a RSE. However what differentiates AIM shares from shares listed on the main London Stock Exchange market for most tax treatments is that they are not included in the official UK List maintained by the Financial Conduct Authority in its capacity as the UK listing authority. Accordingly the shares in a company which are traded solely on AIM are not 'listed on a RSE'.
- 5 There is no guarantee of qualification for tax relief and that there is also the risk of a change in legislation which may have an adverse effect on any potential tax saving that might otherwise have arisen.

Section 8 – Client suitability *continued*

- 6 If the Customer has indicated on the Account application that he/she wishes the Portfolio to be invested with a view to achieving a particular tax planning objective for the Customer's Portfolio FAML will seek to purchase investments for the Portfolio that it considers will be qualifying instruments at the time they are acquired however FAML cannot give any assurances that such investments will continue to be qualifying instruments thereafter.
-
- 7 FAML recommends that the Customer take independent tax advice particularly where it is considering investing in order to seek to mitigate the ultimate effect of tax on the assets of the Customer.
-

Section 3 – Your Tolerance to Taking Investment Risk

Typically, the more risk you are willing to take when making an investment, the higher the potential for growth and the greater chance of loss. Over a period of time, the value of an investment can rise and fall – this is known as volatility. Generally, the higher the investment risk, the higher the potential volatility, but also the higher the potential returns.

The AIM IHT Portfolio will invest into a discretionary managed portfolio of shares in companies that are not listed on the main London Stock Exchange and as such is considered a high risk investment.

Your tolerance to risk will depend on your financial circumstances and goals.

3.1 What are your general investment objectives

Capital Growth is the priority

Income is the priority

Yes No Unsure

4.2 Are you aware that tax legislation could change in the future in a way that might stop this investment qualifying for Business Relief?

Yes No Unsure

4.3 This AIM IHT investment is considered to be a high risk investment because it is invested in the shares of companies that are not listed on the main London Stock Exchange. Would you describe yourself as a cautious investor in relation to this investment?

Yes No Unsure

4.4 This AIM IHT investment will invest in the shares of companies that are not listed on the main London Stock Exchange. As such investors should be prepared that they might fall or rise in value more sharply. For this investment to meet your long-term objectives, would you be willing to accept the risk of significant short-term falls in value?
